In The Specification

Please enter the enclosed substitute SEQUENCE LISTING into the specification.

Please amend the paragraph beginning at line 7 of page 16 as follows:

The invention also includes a vector comprising a ribosome binding site which optionally overlaps by one nucleotide with a *Sgf*I recognition site and a recognition site which is not in the open reading frame for a restriction enzyme that has infrequent restriction sites in cDNAs or open reading frames from at least one species and generates blunt ends. The vector, once digested with *Sgf*I and the restriction enzyme that has infrequent restriction sites in cDNAs or open reading frames from at least one species and generates blunt ends, and ligated to a DNA fragment comprising an open reading frame encoding a peptide or polypeptide flanked by

5' $CGCCATGX_1Y_1$ (SEQ ID NO:2)
3' $TAGCGGTACX_2Y_2$ ~~(SEQ ID NO:2)~~ (SEQ ID NO:71)

and a blunt end, yields a recombinant vector which encodes the peptide or polypeptide, wherein X_1 is the first codon which is 3' to the start codon for the open reading frame, wherein X_2 is the complement of X_1, wherein Y_1 is the remainder of the open reading frame, and wherein Y_2 is the complement of Y_1.
